

Construction / Bridge Building

From the addition of a small expansion or annex to the construction of a tall high rise, American Alloy Steel has the high strength steels to meet your physical requirements. Our A 572-50 plate products are used in more moderate environments while our A 572-65 is used in applications requiring higher strength levels.

The shipment of vital goods and services are an integral part of our every day commerce. Infrastructure is a fundamental to our nation's transportation system and is reliant upon the integrity of our roads and bridges. To support this expansion and reconstruction effort we stock A 588 and A 709 50 starting at 3/16" thick.
